

2016 Preventive Prescription Drugs:

Prescription drugs that can help keep you from developing a health condition are called *preventive prescription drugs*. They can help you maintain your quality of life and avoid expensive treatment, helping to reduce your overall health care costs. If you are prescribed a preventive prescription drug, you will only pay a percentage of the total cost – right from the beginning.

*Medications in these classes may require prior authorization to determine if they are being used preventatively for coverage at a reduced cost for high deductible health plan (HDHP) members.

NOTE: All medications are covered based on the benefit design of your plan. Please check your benefits booklet for coverage details. This list does not indicate coverage. You or your doctor may be asked to prove that the drug you're taking is being used for prevention. This list does not include all conditions that may be prevented with preventive prescription drugs or all preventive drugs available. Your plan sponsor believes that these drugs satisfy the requirements for preventive care as outlined by the U.S Treasury Department but cannot ensure that the Treasury Department would agree that all of these drugs satisfy the definition of preventive care.
